Experience

Software Engineer Intern, Analytix Hub Technologies

Dec 2025 – Mar 2026

- Developed a centralized Master Data Management platform using Node.js and PostgreSQL to orchestrate data pipelines and manage master data across multiple datasets.
- Built a unified dashboard to monitor table health, data quality, and pipeline status, providing centralized visibility into data issues and processing.
- Integrated Great Expectations for automated schema, constraint, and business-rule validation, along with fuzzy matching for deduplication and intelligent entity resolution.

Projects

Master Data Management

- Developed a centralized Master Data Management platform for data pipeline orchestration, real-time table health monitoring, automated schema and business rule validation using Great Expectations, and fuzzy matching-based entity resolution and deduplication to improve data quality and integrity.
- **Technologies:** React, Python, Node.js, Express, PostgreSQL, Great Expectations, Fuzzy Matching

Campus Intelligence Platform

- Developed a real-time campus intelligence platform that aggregates user-reported data on crowding, parking, Wi-Fi outages, transport delays, and infrastructure issues, using event detection and WebSockets to deliver live campus updates and predictive analytics.
- **Technologies:** Java, Spring Boot, React, TypeScript, PostgreSQL, Python, FastAPI, WebSockets, AWS, Docker

AI Resume Analyzer

- Developed an AI-powered Resume Analyzer with automated ATS scoring, job description matching, LLM-based resume parsing for skill gap analysis and candidate-job alignment, and a secure RESTful backend with authentication, document management, analysis history, and personalized resume recommendations.
- **Technologies:** FastAPI, Python, PostgreSQL, SQLAlchemy, JWT Authentication, Gemini API

Education

S.R.M Institute of Science and Technology (SRMIST) KTR

Aug 2023 – May 2027

B.Tech in Computer Science and Engineering - Internet of Things | CGPA: 8.3/10

Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML

Databases: PostgreSQL, MySQL, Snowflake, MongoDB

Frameworks: FastAPI, React.js, Node.js, Express.js, SQLAlchemy, Spring Boot

Data Analytics: Great Expectations, Power BI, KNIME, Fuzzy Matching

Tools: Git, Claude Code

Authentication and APIs: JWT Authentication, REST APIs, API Integration, WebSockets

Cloud / DevOps: AWS, Docker

Certifications

- **Introduction to Databases** - Coursera
- **MongoDB Associate Developer** - MongoDB

Achievements

- **Organized Large-Scale Hackathons:** Conducted multiple hackathons with 200+ participants, showcasing leadership and teamwork
- **Public Speaking/Event Hosting:** Emceed events, managed stage interactions, and engaged audiences with a strong mic presence
